HarborView Tours Vessel Radio Remediation List
Analysis date: April 1, 2026

Important Note: In this report, VHF means marine Very High Frequency radio. DSC means Digital Selective Calling, which is a digital distress/calling feature used on marine radios. Part 80 refers to the FCC rules for maritime radio equipment and operation.

Models Classified as Not Approved or Unclear:

UNIDEN-SHUTTLE: Unclear

The Uniden MHS75 is a handheld marine VHF radio assigned as a shuttle helm radio on 65 ft 7 in shuttle vessels. The provided facts do not state whether the shuttle vessels carry more than six passengers for hire at a time on covered waters, which needs to be known to establish whether 47 CFR 80.901 applies, and whether the vessel must carry a radiotelephone installation under 47 CFR Part 80 Subpart S. If those rules apply, 47 CFR 80.905 requires a VHF-DSC radiotelephone installation for vessels operating within 20 nautical mi of land, and the MHS75 is not shown to have DSC capability. Since the needed facts are not provided, this entry is Unclear.

ICOM25-SHUTTLE: Unclear

The Icom IC-M25 is a handheld marine VHF radio assigned as a shuttle helm radio on 65 ft 7 in shuttle vessels. The provided facts do not state whether the shuttle vessels carry more than six passengers for hire at a time on covered waters, which needs to be known to establish whether 47 CFR 80.901 applies, and whether the vessel must carry a radiotelephone installation under 47 CFR Part 80 Subpart S. If those rules apply, 47 CFR 80.905 requires a VHF-DSC radiotelephone installation for vessels operating within 20 nautical mi of land, and the IC-M25 is not shown to have DSC capability. Since the needed facts are not provided, this entry is Unclear.

UNIDEN-HARBOR: Unclear

The Uniden MHS75 is assigned as permanent secondary harbor-tour helm radios on 70-84 ft harbor-tour vessels. The MHS75 is a marine VHF handheld, but this assignment is a permanent harbor-tour helm role, not just a loose backup handheld role. 33 CFR 26.03 applies to power-driven vessels of 20 m or over and requires bridge-to-bridge radiotelephone capability in the 156-162 MHz marine VHF band, including VHF FM channel 22A. For portable bridge-to-bridge equipment permanently associated with a vessel, 47 CFR 80.1017 requires an external antenna connector and a compatible vessel antenna that can be used during normal listening watch. The inventory only says the radios are kept in manufacturer charging cradles at the helm. It does not provide the external antenna connector, vessel antenna, or setup facts needed to verify this permanent helm assignment. Since those facts are not provided, this entry is Unclear.

BAOFENG-HARBOR: Not Approved

The BaoFeng BF-F8HP is assigned as a harbor-tour helm radio on 70-84 ft harbor-tour vessels. The stock BF-F8HP is a programmable handheld radio, not a stock marine VHF/Part 80 bridge-to-bridge helm radio. 47 CFR 80.203 requires maritime-service transmitters to be certified for Part 80 operations, and the stock BF-F8HP is not shown to be a Part 80 marine VHF radio. The former technician's programmed channels do not make the stock model compliant for this assignment because the audit rules require the stock version of the exact model listed and do not allow programmed or modified versions to substitute for compliance. The exact stock model also does not have published water resistance or waterproofing for handheld helm use, which is required by the audit rules. This entry is Not Approved.

HX890-HARBOR: Unclear

The Standard Horizon HX890 is assigned as permanent secondary harbor-tour helm radios on 70-84 ft harbor-tour vessels. The HX890 is a real marine VHF handheld with DSC/GPS features, but this assignment is a permanent harbor-tour helm role. 47 CFR 80.1017 requires portable bridge-to-bridge equipment permanently associated with a vessel to have an external antenna connector, and requires the vessel to have a compatible external antenna that can be used with the portable equipment during normal listening watch. The inventory only says the units are kept in manufacturer charging cradles at the helm. It does not provide the external antenna connector, vessel antenna, or setup facts needed to verify this permanent helm assignment. Since those facts are not provided, this entry is Unclear.

HX890-UPPER: Unclear

The Standard Horizon HX890 is assigned as permanent upper-deck harbor-tour steering-station radios on 70-84 ft harbor-tour vessels. The HX890 is a marine VHF handheld, but this is still a permanent steering-station role on harbor-tour vessels, not just a spare handheld role. Under 47 CFR 80.1017, portable bridge-to-bridge equipment permanently associated with a vessel must have an external antenna connector, and the vessel must have a compatible external antenna that can be used during normal listening watch. The inventory only says the radios are kept in manufacturer charging cradles at the upper-deck steering station. It does not provide the external antenna connector, vessel antenna, or setup facts needed to verify this assignment. Since those facts are not provided, this entry is Unclear.

ICOM94-UPPER: Unclear

The Icom IC-M94D is assigned as permanent upper-deck harbor-tour steering-station radios on 70-84 ft harbor-tour vessels. The IC-M94D is a marine VHF handheld with DSC/GPS/AIS features, but this is still a permanent steering-station role on harbor-tour vessels, not just a spare handheld role. Under 47 CFR 80.1017, portable bridge-to-bridge equipment permanently associated with a vessel must have an external antenna connector, and the vessel must have a compatible external antenna that can be used during normal listening watch. The inventory only says the radios are kept in manufacturer charging cradles at the upper-deck steering station. It does not provide the external antenna connector, vessel antenna, or setup facts needed to verify this assignment. Since those facts are not provided, this entry is Unclear.

Models Classified as Approved:

T600-SHUTTLE: Approved

The Motorola Talkabout T600 H2O is assigned only to supplemental crew and boarding radios on the 65 ft 7 in shuttle vessels. It is used for boarding, dockside staff coordination, and passenger-flow tasks, not as a helm radio or required vessel radiotelephone. Family Radio Service can be used for business staff coordination under 47 CFR 95.503, and the T600 H2O has the waterproofing needed for this outdoor crew and boarding role under the audit rules. Since there are no missing helm, vessel, or installation facts needed for this supplemental assignment, this entry is Approved.
